Trends and Changes in Assisted Housing in Connecticut:

A View from the Affordable Housing Appeals List, 2002 - 2020

by Sean Ghio
Policy Director,

Partnership for Strong Communities | pschousing.org

Introduction

This report examines the last 19 years of data on how much government-assisted and deed-restricted housing (as defined by Section 8-30g) each municipality has. The Connecticut Department of Housing collects and maintains an annually published Affordable Housing Appeals List that provides a count of such housing for each Connecticut municipality.[1]

For the purpose of this list, government-assisted and deed-restricted housing is composed of:

1. Housing receiving financial assistance under any governmental program for the construction or substantial rehabilitation of low or moderate income housing,
2. Housing units with tenants who have federal Housing Choice (Section 8) vouchers or state rental assistance certificates (RAP),
3. Housing with Connecticut Housing Finance Authority (CHFA) and United States Department of Agriculture (USDA) single family mortgages, and
4. Housing subject to deeds restricting its sale or rental to low- and moderate-income people at prices that will result in housing cost being no more than 30% of income.

The Affordable Housing Appeals List is collected for purposes of determining municipal exemption from the provisions of Section 8-30g and is not an inventory of all housing in the state that is “affordable” in the lay sense of the term. Instead, it is a tool for exempting from the act those towns in which a relatively high percentage of the housing units are government assisted or subject to long-term affordability deed restrictions. The list is not intended to serve as a comprehensive and exhaustive inventory of affordable housing in Connecticut. However, because the data have been collected annually in a similar fashion for some 30 years, the list offers us an opportunity to view how this type of long-term affordable housing supply in Connecticut (as defined by Section 8-30g) has changed over time.

[1] https://portal.ct.gov/DOH/DOH/Programs/Affordable-Housing-Appeals-Listing

In 1990 the Affordable Housing Land Use Appeals Act (Section 8-30g) became law in Connecticut. Based on the recommendations of a Blue Ribbon Commission formed by Governor William O'Neill, Section 8-30g allows housing developers to seek approvals for low or mixed-income developments even when they do not meet a municipality's zoning regulations. Appeals of zoning denials under Section 8-30g follow an alternative appeals procedure that places the burden of proof on the local zoning commission. Municipalities with 10 percent or more of their housing units government assisted or deed restricted for long-term affordability , are exempt from the appeals procedure.

As of 2020, 31 of Connecticut's 169 municipalities have at least 10 percent of their housing supply that meets this standard.

For this report, analysis of Connecticut's affordable housing supply will be limited to the assisted housing units counted as part of the Affordable Housing Appeals List from 2002 through 2020.

Key Findings

Connecticut's assisted housing continues to be concentrated in 30 or so municipalities.

Connecticut's BIPOC population is concentrated in the communities exempt from Section 8-30g. In 2020, 70.6% of BIPOC residents lived in these 31 municipalities.[2]

Hartford alone provides 11.9% of the state's assisted housing.

The supply of deed restricted units has grown by 150% in nineteen years while still representing a small portion of overall assisted housing supply.

[2] BIPOC stands for Black, Indigenous, and people of color.

Statewide Assisted Housing Supply from 2002 to 2020

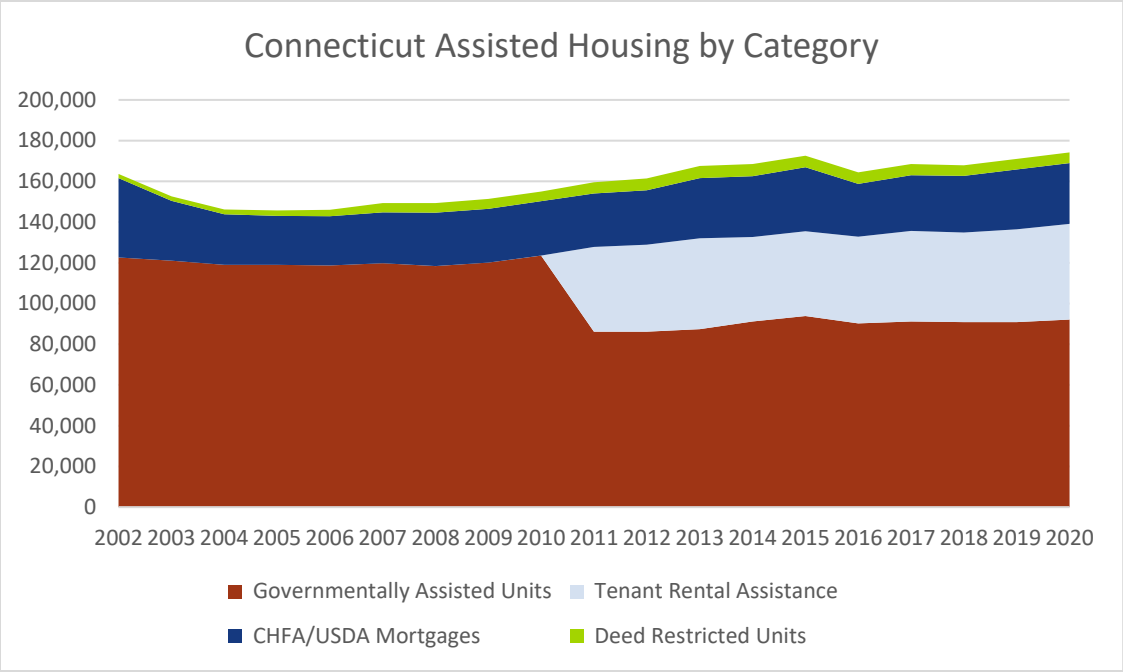

The supply of assisted housing in Connecticut is influenced by a long list of programs, funding sources, and market forces. Federal, state, and local government policy all affect the ultimate supply and location of assisted housing in our state through funding, policy, and regulatory decisions that can promote or discourage affordable housing in places.

In 2002 there were 163,706 assisted housing units representing 11.81% of Connecticut's total housing supply. By 2020, Connecticut had 174,208 assisted housing units representing 11.71% of total housing supply. Over 19 years, the supply of assisted housing had a net increase of 10,502 units, but assisted housing represents a slightly smaller percentage of our total housing stock than it did in 2002.

	% Change 2002 - 2020	Unit Change
Gov't/Tenant	13.4%	16,447
CHFA	-23.3%	(9,090)
Deed Restricted	150.0%	3,145
All Assisted Units	**6.4%**	**10,502**

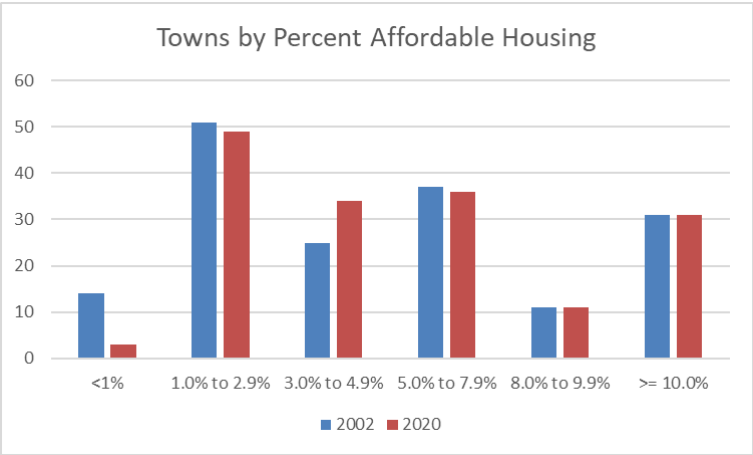

Change in our assisted housing supply has not taken a steady path. Between 2002 and 2004, supply plummeted by more than 17,000 units over 3 years. Nearly all that change was due to a sharp drop in the number of CHFA single family mortgages beginning in 2002. If the volatility of CHFA single family mortgages were removed from this analysis, the growth in the affordable supply over the last 19 years would be a much stronger 19,592 housing units. This is a reminder that Connecticut's assisted housing supply changes due to the actions of many actors – federal and state governments, local officials, housing developers, and individual homebuyers.

During the same period, deed restricted housing units grew by 150%, and the combined category of governmentally assisted housing and tenant rental assistance (representing most of the existing supply in 2002) grew by a healthy 13.4% over the period.

How much has the assisted housing supply changed in each town since 2002?

Assisted housing supply increased by at least 20% since 2002 in 33 municipalities, but it decreased in 58 municipalities. East Hartford's supply of assisted housing dropped by 522 units, and Meriden declined by 429 units.

The accompanying chart shows the distribution of change across all 169 municipalities. While this is a useful measure to understand what the change in supply looks like relative to the supply in 2002, it conceals the fact that in 2002 many municipalities had very little assisted housing – most municipalities (91) had less than 5% of their housing stock counted as affordable.[3]

[3] See the appendix for a town-by-town table of change in assisted units and the percentage change in affordable housing.

How has the distribution of assisted housing changed since 2002?

Town	2002		Town	2020
Ansonia	15.9%		Ansonia	15.5%
Bloomfield	15.3%		Bloomfield	11.1%
Bridgeport	20.5%		Bridgeport	20.7%

Winchester	16.4%		Windham	28.7%
Windham	26.5%		**Windsor Locks**	12.8%

The state's supply of assisted housing remains about as geographically concentrated as it was nearly 20 years ago. In 2002, 31 municipalities had assisted housing supply equal to or greater than 10% of their total housing supply. (See table at left). These municipalities are exempt from the provisions of Section 8-30g. These 31 municipalities had a total of 127,960 assisted housing units representing 78.2% of the total supply of affordable homes in the state.

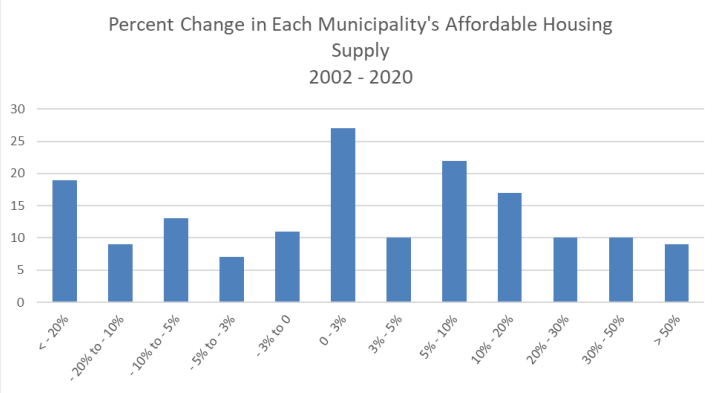

In 2020, 31 municipalities were exempt with a total of 133,216 assisted housing units. This represents 76.5% of the state's total supply of assisted housing.

The group of municipalities with an assisted housing supply equal to or greater than 10% of its housing stock has varied little over the last 19 years. In 2002, Brooklyn, Colchester, and Naugatuck all were above 10%. In 2020, these three municipalities were replaced by Derby, North Canaan, and Windsor Locks. Otherwise, the group of municipalities has remained the same. In this collection of 34 municipalities, 21 have

had a decrease in the percentage of their housing stock that is assisted between 2002 and 2020.

Stamford, New Haven, and Hartford have contributed a large percentage of the net gain in assisted units in the period. Of the 10,502 net increase in assisted housing supply, 58% of the new units (6.049) are from these 3 cities. Connecticut's assisted housing supply continues to be particularly concentrated in its capitol city. Hartford's increase in assisted housing represents 23% of the gain.

In 2002, Hartford alone had 11.1% of the state's assisted housing supply. By 2020, Hartford's share of the state's assisted housing supply had grown to 11.9% while the city's total housing stock only represents 3.5% of the state's total. Nearly one of every eight assisted housing units in Connecticut is located within the 18 square miles of Hartford. In 2002, 36.0% of housing in Hartford was assisted. By 2020, that percentage had grown to 39.9%.

How does the assisted housing supply reflect segregation in Connecticut?

The Affordable Housing Appeals List illustrates the degree of residential racial and economic segregation that persists in Connecticut. In 2020, 70.6% of Connecticut's nonwhite population lived in the 31 municipalities exempt from Section 8-30g.[4] The total population in exempt municipalities only represents 44.2% of Connecticut's total population. Sixteen of the 31 exempt municipalities also are included in the "distressed municipalities" list compiled by Connecticut's Department of Economic and Community

[4] http://data.ctdata.org/dataset/population-by-race-by-town, American Community Survey, 2015-2019, Table B03002.

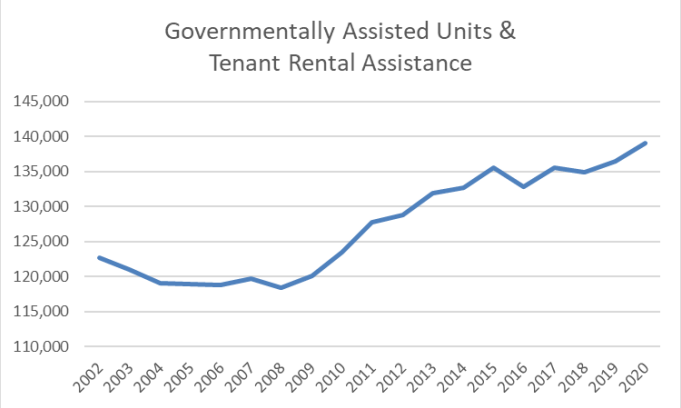

Development.[5] This list identifies the state's most fiscally and economically distressed municipalities based on factors including tax base, personal income of residents, and the residents' need for public services.

In the sections that follow, this report will look more closely at each category of assisted housing and explore how and where the supply of each category has changed during the 19 year period from 2002 through 2020.

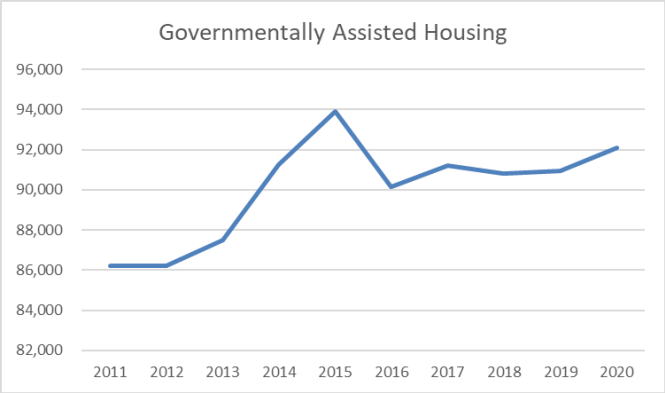

[5] https://portal.ct.gov/DECD/Content/About_DECD/Research-and-Publications/02_Review_Publications/Distressed-Municipalities

Governmentally Assisted Housing and Tenant Rental Assistance

Included in the Governmentally Assisted category are housing units that receive financial assistance "under any governmental program for the construction or substantial rehabilitation of low and moderate income housing that was occupied or under construction by the end date of the report period".[6] This includes housing created under a myriad of federal housing programs, including the Low Income Housing Tax Credit program (LIHTC), and state investments such as Connecticut's Housing Trust Fund and Connecticut's Affordable Housing Program (FLEX).[7]

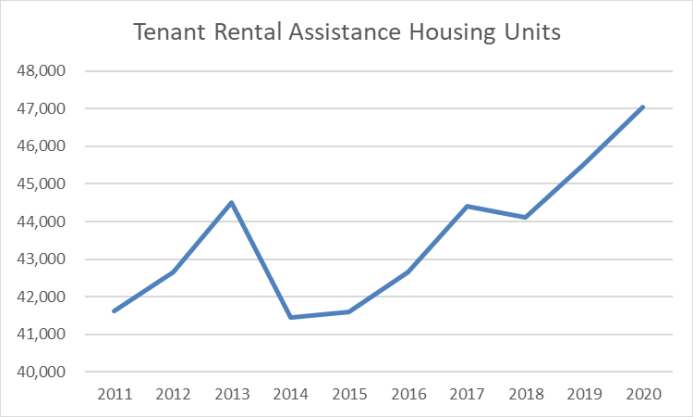

In 2002, there were 122,662 government assisted units representing 74.9% of all assisted housing units. Until 2011, the housing with tenant rental assistance and government supported housing were collected in one Governmentally Assisted Units category. Since 2011, units with tenant rental assistance have been collected in its own category. In 2002, this category included government assisted housing and tenant rental assistance. By combining these two categories for years from 2011 – 2020, we can compare the housing supply across the whole study period of 2002 – 2020.

In 2020, combining these two categories to compare with 2002 totals, there were 139,109 assisted housing units in these categories representing 79.9% of all assisted housing in the state – an increase of

[6] https://portal.ct.gov/DOH/DOH/Programs/Affordable-Housing-Appeals-Listing
[7] https://portal.ct.gov/DOH/DOH/Programs/FLEX

16,447 governmentally assisted units and tenant rental assistance since 2002. Looking only at the Governmentally Assisted Housing category since 2011, the number of housing units has grown from 86,209 to 92,075. An increase of 6.8%.

We cannot determine how many of the units in 2002 were from tenant rental assistance, but we can assess how the tenant rental assistance category has changed since data began to be tracked separately in 2011. This category includes rental housing occupied by persons receiving rental assistance from the State Rental Assistance program (RAP) or the federal Housing Choice Voucher program (Section 8).

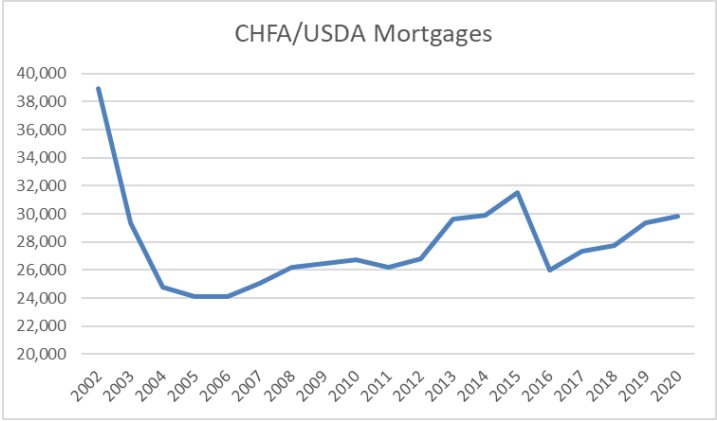

Since 2011, tenant rental assistance supply has increased by 10% from 42,649 to 47,034, increasing its share of the assisted housing supply from 26.1% in 2011 to 27% in 2020.

CHFA & USDA Single Family Mortgages

This category includes ownership housing financed by the Connecticut Housing Finance Authority or the U.S. Department of Agriculture.[8]

The steep decline in CHFA single family mortgages from 2002 – 2006 is likely due to homeowners with CHFA mortgages either selling their homes, or more likely, refinancing out of a CHFA mortgage. Single family mortgage rates began dropping in 2000 making refinancing more attractive to borrowers.[9]

Of the assisted housing categories collected in the Affordable Housing Appeals List, this category is the most volatile over the period between 2002 – 2020.

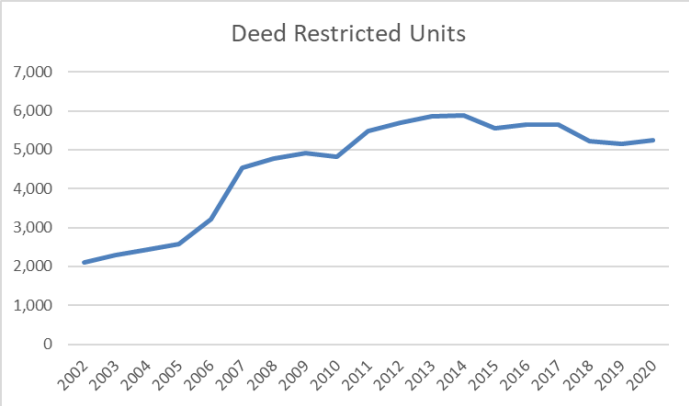

In many ways CHFA single family mortgages compete with the private mortgage market. CHFA's single family mortgage program also relies on the active engagement of real estate agents and mortgage brokers. As a result, CHFA's single family program is subject to similar pressures as private market home lending products.

[9] https://fred.stlouisfed.org/series/MORTGAGE30US

Deed Restricted Units

This category includes deed-restricted properties or properties with deeds containing covenants or restrictions that require the dwelling be sold or rented at prices assisted to low- and moderate-income households.[10]

In Connecticut, assisted housing units created through Section 8-30g development proposals and/or local inclusionary zoning ordinances that require a percentage of units in a housing development be set-aside as assisted contribute to this total. Affordability restrictions on housing are not typically permanent; they expire after a set number of years specified in the deed. As a result, the supply of deed restricted units fluctuates as the supply ages.

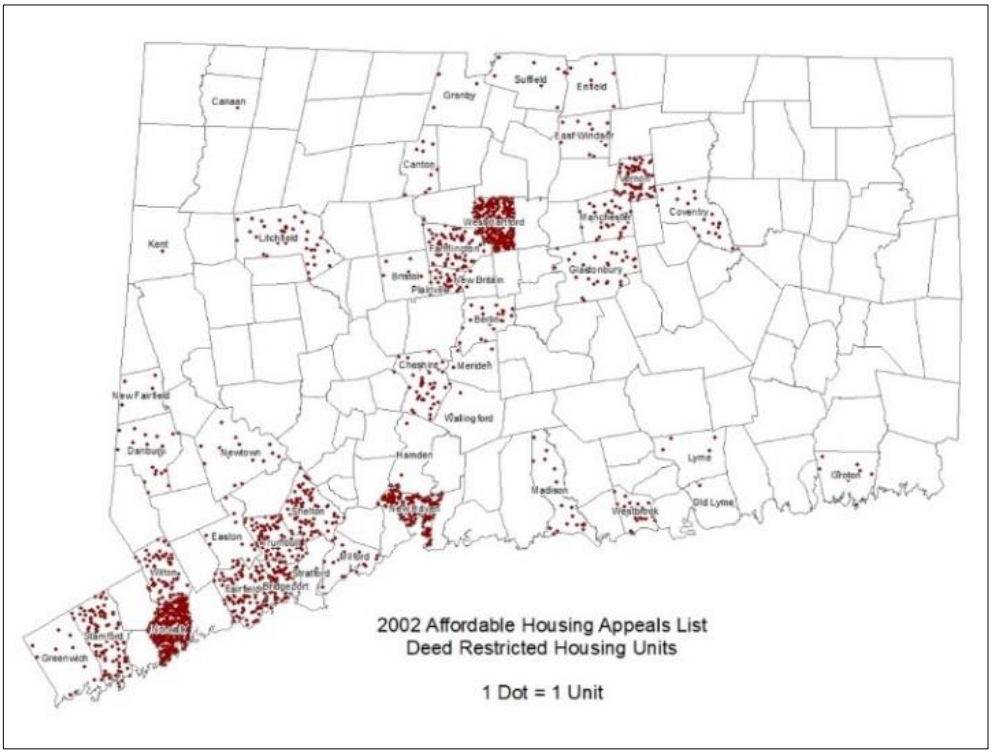

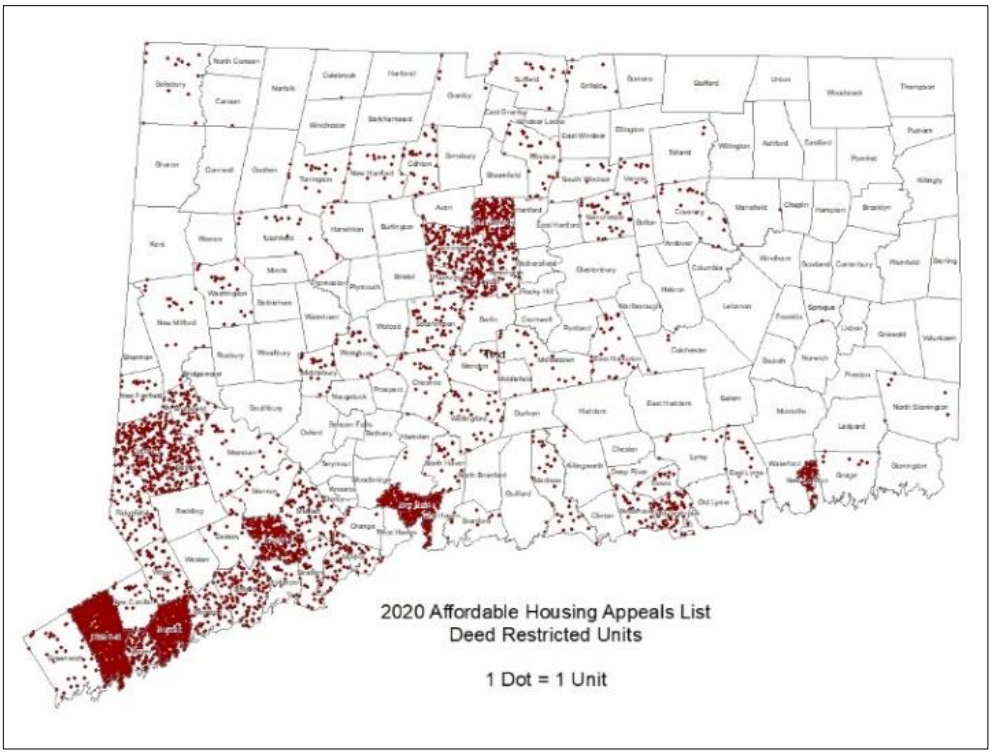

For the period 2002 – 2021 there was a net increase in the number of deed restricted units of 3,145. The supply of deed restricted housing peaked in 2014 at 5,893 units. By 2020, the supply had decreased to 5,241.

In 2002, 42 municipalities had deed restricted housing units. By 2020, the number of towns with a supply of deed restricted housing had grown to 75. For some communities with few assisted housing units in 2002, growth in deed restricted housing represents a significant boost to the total assisted housing in town. For example, the addition of 104 deed restricted units from 2002 to 2020 lifted the total assisted housing in Darien by 120%. There were similar gains in communities including Old Saybrook, Lyme, Killingworth, and Washington, among others. It must be noted that these and other communities had very few assisted units in 2002, so the number of deed restricted units that created these levels of change are relatively modest.

[10] Households with incomes less than or equal to 80% of the area median income.

The accompanying maps illustrate how the distribution of deed restricted housing units has expanded across the state from 2002 to 2020.

Risks and Policy Considerations

Connecticut continues to need ongoing public investments in preserving and creating assisted housing and expanding mobile housing vouchers for low income households. Affordable housing supply increased in the last twenty years, but the affordability gap remains; one of every two renter households in the state pay an unaffordable amount of their income on housing costs.

While the supply of assisted housing has grown in communities of all types across the state, assisted housing continues to be overwhelmingly concentrated in our cities. By 2020, the supply of assisted housing grew most in municipalities that already had the most assisted housing in 2002, most conspicuously Hartford. The continued growth of assisted housing in places that already have significant affordable housing supply risks further concentrating poverty and reinforcing Connecticut's already deep racial segregation.

The Affordable Housing Appeals List has limitations as a measure of affordable housing supply in Connecticut. To take one example, assisted housing counts do not reflect the demand for affordable housing at different income levels. Without knowing what the need is for families at different income levels, how much does the volatility of CHFA single family mortgages over the last twenty years matter? How important are changes in the number of deed restricted units when we do not know the affordability levels of units that have been created or expired?

This is not a shortcoming of the Affordable Housing Appeals List or Section 8-30g. The appeals list is collected to serve the requirements of Section 8-30g. It should not be used as the sole measure for judging whether the state is meeting its housing needs. Policy makers, advocates, and residents would be better served to look at the appeals list in the context of housing studies such as the recent CHFA Housing Needs Assessment[11] and Statewide Assessment of Affordable and Accessible Housing Needs[12].

[11] https://www.chfa.org/assets/1/6/Connecticut_HNA.pdf

[12] https://www.urban.org/research/publication/housing-connecticuts-future-meeting-states-affordable-and-accessible-housing-needs

Connecticut Housing Finance Authority published a Housing Needs Assessment in November 2020 that identifies gaps in housing affordability and availability that can be addressed by CHFA through its policies and programs. The study found that "[t]here is a shortage of units for renters with household income between 0-30% AMI, leaving the majority of households cost burdened by renting higher cost units and creating competition for housing in the 31-50% income band. Renters in the 31-50% AMI tier have enough affordable units in the stock, but households from both lower income tiers and higher income tiers occupy large proportions of this stock. The majority of renters earning 31-50% AMI are cost burdened which suggests these renters are seeking unaffordablBe housing in higher income tiers." [13] These housing market dynamics disproportionately impact BIPOC renters.

In 2020, the Connecticut Department of Housing and the Department of Social Services commissioned Urban Institute and Fairfield County's Center for Housing Opportunity to conduct a statewide assessment of affordable and accessible housing needs of the state. The study recommends prioritization of housing resources based upon need.

"Connecticut's targeted plan to address homelessness has earned Connecticut a national reputation as a leader on this issue. Taking a similarly targeted approach to the production, preservation, and protection of affordable and accessible housing for cost burdened residents could transform the state's ability to make its vision of ensuring housing for everyone a reality."[14]

Looking back at the last twenty years of appeals lists does help us understand how the state's assisted housing supply has changed and stayed the same. What can be said unequivocally is that government subsidy, whether in the form of individual housing vouchers, mortgages, or underwriting affordable housing construction, continues to be the most impactful means to create and maintain assisted housing in Connecticut. This crucial affordable housing supply is at risk. Without continuing public investments,

[13] https://www.chfa.org/assets/1/6/Connecticut_HNA.pdf, p. 18.
[14] https://www.urban.org/research/publication/housing-connecticuts-future-meeting-states-affordable-and-accessible-housing-needs

nearly 14,000 subsidized housing units will have their affordability restrictions expire by 2025.[15]

Public resources (state and federal) must be allocated at a level necessary to preserve the existing assisted housing supply while also expanding the supply of assisted housing available to Connecticut's lowest income households.

Deed restrictions requiring housing affordability, whether through Section 8-30g developments, inclusionary zoning ordinances, or other methods, remain a small, but important, part of the overall assisted housing supply. These units are distributed more broadly across the state in 2020 than in 2002, providing valuable affordable housing opportunities in many communities that are otherwise lacking in assisted housing. However, our state's assisted housing stock remains highly concentrated in a small number of communities, primarily communities of color, with higher concentrations of poverty. If we are to truly break away from Connecticut's intense levels of economic and racial segregation and fulfill the promise of affordable housing – opportunity, we will need to enact policies that explicitly serve to expand the supply of assisted housing in towns across the state.

Zoning reforms adopted in 2021 have improved the land use environment for further development of lower cost housing in communities across the state, but deeper reforms targeting barriers to housing development must be made and coupled with expanded public investment if we intend to significantly grow the supply of assisted housing in communities of all kinds in Connecticut.[16]
